 - Conclusion

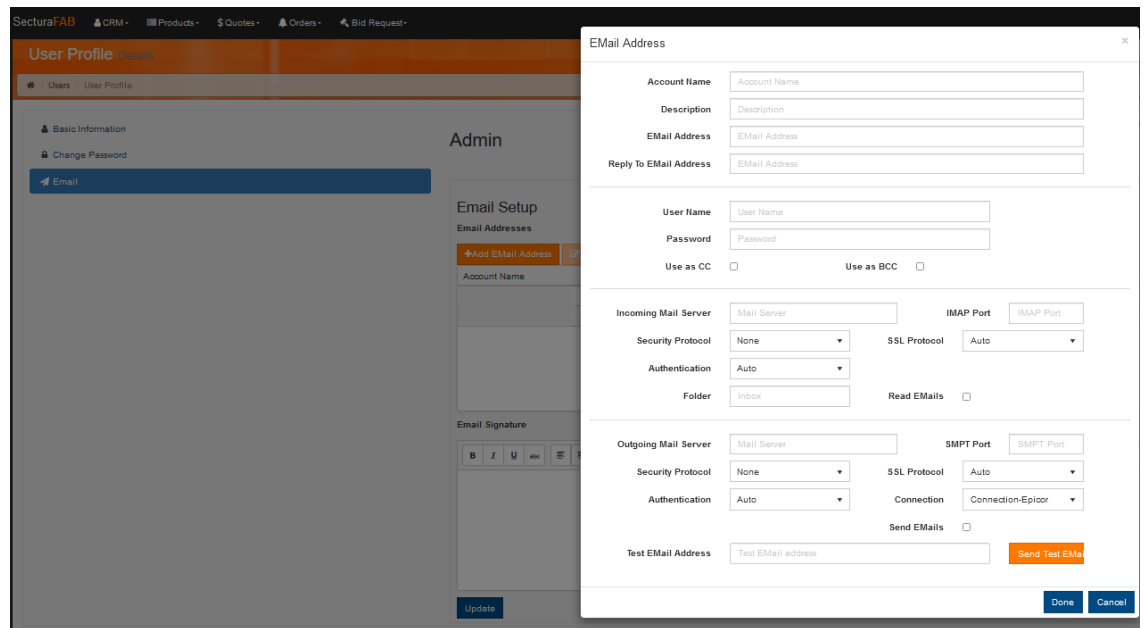

SecturaFAB - What's NEW - October 2023

Introduction: We are delighted to present the latest release of our SecturaFAB, packed with exciting enhancements and crucial bug fixes. In this release, we've listened to your feedback and are introducing two remarkable features that will streamline your quoting and estimating process, along with resolving a few pesky bugs that have been causing some headaches. We remain committed to providing you with a powerful and reliable tool for your business needs. Read on to discover the new capabilities and improvements that await you in this update.

Read on to explore what's new:

- **New Multi-Email Authentication Integration Features**

- With this release, we now offer the ability to authenticate multiple email addresses within your tenant, enabling seamless integration of email servers from Outlook, Gmail, and other providers directly into our platform. This feature marks a significant step forward in making our software more user-friendly and integrated with the tools you rely on daily. We are committed to enhancing your experience and providing a seamless, efficient solution for your quoting and estimating needs.
- To begin taking advantage of this feature, navigate to our Knowledgebase and follow the step-by-step guide to authenticate your email addresses. Once authenticated, you'll experience the convenience of having your email directly integrated with our platform.

- **Per Unit Cost Categories Available on Linear Products**

- We are excited to announce an important update to SecturaFAB that brings greater flexibility to your pricing strategies. In this release, we have extended the use of per unit cost categories beyond plate and sheet products, making it available for linear products as well.

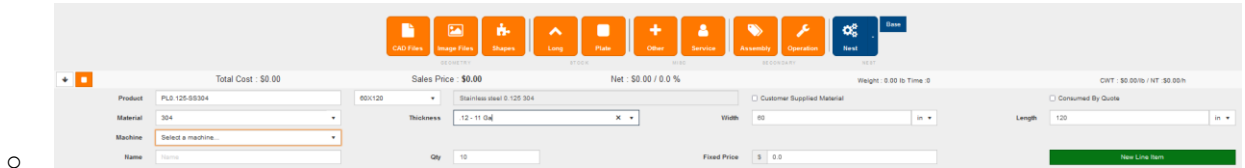

The screenshot shows the 'New Product' form in SecturaFAB. The product type is 'Tube'. The weight cost category is set to 'perUnit'. The material is 'perUnit - perUnit cost \$10.00'. The size1 is '0.4 in' and size2 is '0.5 in'. The wall thickness is '0.3 in' and weight is '0 lb/in'. The length is '0 in'. The cost category is 'Select Weight Category'. The SKU is 'SKU' and the location is 'Select Location...'. The 'Active' checkbox is checked. Buttons at the bottom are 'Create', 'Create Next', and 'Cancel'.

- **Add Outsourced Items to Quotes, Regardless of Inventory Location Validity**

- In previous versions if you are quoting from inventory locations you could not add an item to a quote unless the material was present in one of your inventory locations. A significant enhancement was made in this release of SecturaFAB that will simplify your workflow and expand your quoting capabilities. In this release, we've made a crucial change that enables you to add outsourced items, or items with customer supplied material to your quotes, even though the material is not in a valid inventory location.

The screenshot shows the 'Outsource' form in SecturaFAB. The item name is 'Base Plate with Cutout'. The material is '201 Polished'. The thickness is '0.030 - 20 Ga'. The unit cost is '\$ 0.00' and the margin is '% 0'. The inventory location is 'Cincinnati'. The city is '12'. The vendor is 'Vendor Name'. The memo is 'Memo'. The 'Add Material Charge' checkbox is checked. The 'Shape - Parameters' section shows a diagram of a square with a smaller square cutout. The parameters are: Width: 10, Length: 10, Corner Type: None, Inner Width: 5, Inner Length: 5, Inner Corner Type: None, Radius - Chamfer: 1, Inner Radius - Chamfer: 1. Buttons include 'New Line Item' and 'Add Material Charge'.

- **Bug Fix: Resolved Undefined Material Issue Caused by Machine Selection for Plate Items**
 - We are pleased to announce the resolution of a critical issue in SecturaFAB. In this release, we have fixed a bug that previously caused the material for a line item on a quote to appear as "undefined." This bug occurred as a result of a change that added a machine selection in the previous build. We have also made improvements to the UI by relocating the machine selection allowing all material properties to remain collinear.

Conclusion: We hope these new features and bug fixes enhance your experience with SecturaFAB. Your satisfaction is our top priority, and your feedback continues to be a driving force behind our commitment to continuous improvement. If you have any further suggestions or encounter any issues, please don't hesitate to reach out to our support team. We look forward to continuing to support your business with tools that simplify and empower your quoting and estimating processes.

You will notice the updated software version 2023.10.13.6 automatically so you can begin to take advantage of the improvements. For any questions or support please reach out to our Customer Success team with the email (help@secturasoft.com) or via chat within SecturaFAB.

Best regards,

SecturaSOFT Development Team
